## **AMENDMENTS TO THE CLAIMS**

1. (Original) A computer-based method for organizing digital photos, comprising:
extracting objects of interest from a plurality of digital photos;
cropping said plurality of digital photos to generate images of isolated objects of interest;
applying an object recognition algorithm to determine the similarity of isolated objects
with a reference model;

displaying a plurality of objects arranged as a function of the determined similarity; and receiving user input to associate said objects with a particular classification.

- 2. (Original) The invention of claim 1, wherein said steps of applying a recognition algorithm and displaying are repeated as more objects are grouped as belonging to a certain identity.
- 3. (Original) The invention of claim 1, wherein said objects are faces.
- 4. (Original) The invention of claim 3, wherein isolated faces are displayed in a view that includes an area surrounding the face.
- 5. (Original) The invention of claim 1, further comprising annotating image objects based on said classification.
- 6. (Original) The invention of claim 1, further comprising controlling a photo presentation based on said classification.
- 7. (Currently amended) The invention of claim 6, wherein said step of controlling athe photo presentation displays a label for an isolated object of interest based on said classification.

DRA/WCJ/bad

Application No. 10/734,259

Amendment dated July 27, 2007

Reply to Office Action of April 27, 2007

8. (Original) The invention of claim 1, further comprising controlling a zoom function

based on said classification.

9. (Original) The invention of claim 6, wherein said photo presentation is a slide

presentation.

10. (Currently amended) The invention of claim 1, wherein said step of displaying athe

plurality of objects displays the objects in order of similarity to the reference model.

11. (Original) The invention of claim 1, wherein said user input drags an image of an object

of interest into a display area associated with said classification.

12. (Original) An apparatus for organizing digital photos, comprising:

an object detection and cropping unit for extracting objects of interest from a plurality of

digital photos and cropping said plurality of digital photos to generate images of isolated objects

of interest;

a recognition unit for applying an object recognition algorithm to determine the similarity

of isolated objects with a reference model;

a display output for outputting a display of a plurality of objects arranged as a function of

similarity determined by said recognition unit; and

a user input for receiving user input to associate said objects with a particular

classification.

13. (Original) The invention of claim 12, wherein said recognition unit repeatedly applies

said recognition algorithm and said display output updates said display as more objects are

3

grouped as belonging to a certain identity.

14. (Original) The invention of claim 12, wherein said objects are faces.

DRA/WCJ/bad

Docket No.: 0879-0435P

15. (Original) The invention of claim 14, wherein said display output displays isolated faces

in a view that includes an area surrounding the face.

16. (Original) The invention of claim 12, wherein said apparatus annotates image objects

based on said classification.

17. (Original) The invention of claim 12, wherein said output display outputs a photo

presentation based on said classification.

18. (Original) The invention of claim 17, wherein said display output displays a label for an

isolated object of interest based on said classification.

19. (Original) The invention of claim 12, wherein said display output controls a zoom

function based on said classification.

20. (Original) The invention of claim 17, wherein said photo presentation is a slide

presentation.

21. (Original) The invention of claim 12, wherein said display output displays the objects in

order of similarity to the reference model.

22. (Original) The invention of claim 12, wherein said user input drags an image of an object

of interest into a display area associated with said classification.
